

Case 1

Age	17,6
Sex	F
Pathology	bone fracture
AETIOLOGY	post-surgery (orthopedic)
Comorbidities	none
Complications	osteomyelitis
Infection	yes, SA MDR
Surgery	plaque removal
Dehiscence	limited (2cm)
Scar	HS, 7cm, pain
Periscar	fibrotic tissue
Delay	5 months
Treatment	CAP
Sessions	9 (5weeks)
Complications	bone exposed
Associated Therapies	stop AB before CAP
Effects	scar<, healing

- CAP can also be used in the surgical field for the treatment of open wounds.
- CAP should not be used in cases of acute hemorrhages (in this case the reactive species act on the blood and not on the wound).
- CAP can also be used for prostheses and osteosynthesis, since the patient is not crossed by current

Case 1

17yrs
Surgical wound dehiscence
Bone exposure
S.A. MDR infection
Osteosynthesis outcomes
Non-Healing wound
Debridement
6 cycles three weeks

Case 1

Case 1

End of treatment, 9 CAPs, 5 weeks

Case 1

1.
9caps, 5weeks
8/13 – 4/13
MNCPd – MN
Pain yes/no
Exudate ++/0
Bleeding no/no
Infection yes

FOLLOW-UP 8/13-4/13-2/13

6 months follow-up

Case 3

- **Infected wounds**
- **Acute – Chronic**
- **Scars**
- **Newborn and Infants**
- **4 CAPs (2 weeks)**

Case 3

**Zig-zag line
Hyperemia
Space between
Folliculitis
abscess**

Case 11

Age	2.5yrs
Sex	M
Pathology	burn
AETIOLOGY	scald
Comorbidities	none
Complications	scar. HS
Infection	none
Surgery	none
Dehiscence	none
Scar	HS
Periscar	fibrotic, anelastic, attraction
Delay	acute
Treatment	CAP
Sessions	20 (10 weeks)
Complications	parental stress (2 nd child)
Associated Therapies	local silicone gel
Effects	healing, mild scar, white

Case 11

Case 11

Case 11

Pain, NDT

Case 11

6mos Follow-up

Case 16

Age	17yrs
Sex	M
Pathology	lip abscess
AETIOLOGY	pyodermitis
Comorbidities	none
Complications	pain, oedema
Infection	yes
Surgery	no
Dehiscence	no
Scar	possible scar/retraction
Periscar	huge tissue oedema
Delay	acute
Treatment	CAP
Sessions	6 (3 weeks)
Complications	none
Associated Therapies	local disinfection
Effects	healing, no scar, normal skin painless
